

Oleh Levchenko

SENIOR FULL STACK DEVELOPER (REACT / NODE.JS / TYPESCRIPT / AWS)

United Kingdom | leva13007@gmail.com | 07552827084 | linkedin.com/in/oleh-lev | github.com/leva13007

SUMMARY

Senior Full Stack Developer with 9+ years of experience building scalable web applications end-to-end — React/TypeScript frontends, Node.js/NestJS backends, and AWS cloud infrastructure. Experienced with React, NestJS, GraphQL, AWS, microservices, automated testing and CI/CD. Strong in system design, technical decision-making, code review and mentoring developers (10+ mentored to date). Also explores AI-driven engineering, and hosts IT Friday, a weekly developer community.

CORE SKILLS

- **Frontend:** React, TypeScript, JavaScript, GraphQL, Gatsby, Storybook, Accessibility (a11y), SSR/CSR/SSG
- **Backend:** Node.js, NestJS, GraphQL (Apollo), REST API design, microservices (API Gateway pattern), SQL
- **Cloud & DevOps:** AWS (Lambda, ECS, S3, CloudFormation/SAM, Step Functions, SQS/SNS, DynamoDB, IAM, Cognito), CI/CD (CodeBuild/CodePipeline, GitHub Actions), Docker
- **Tooling:** Vite, pnpm, ESLint, Prettier, Husky, Commitlint
- **Testing:** Jest, Vitest, React Testing Library, Cypress, Playwright, Storybook-driven component testing
- **AI-assisted development:** Claude Code (CLI), OpenAI Codex — agentic coding workflows, automation

EXPERIENCE

Full Stack Developer — The AA (UK)

Aug 2022 – Present

Sales and support platform for AA Driving School, serving over 30k users; team of 3-6 full-stack developers.

- Design and build features end-to-end — React/TypeScript frontend, GraphQL (Apollo) APIs, and Node.js/NestJS backend services — across a microservices architecture behind an API Gateway (NestJS)
- Deploy on AWS serverless infrastructure (Lambda, ECS, S3, Step Functions, SQS/SNS, DynamoDB), with infrastructure as code via SAM/CloudFormation
- Introduced Storybook across all frontend applications, cutting reported bugs by roughly half and eliminating so-called “silent” UI bugs entirely
- Integrated third-party services: AWS Cognito, a payments/refunds provider, analytics platforms, and [Monday.com](https://monday.com)
- Introduced unit and integration testing (Jest, Vitest) across frontend and backend, increasing deployment confidence
- Led code review and drove cross-cutting architecture decisions, catching design and scalability issues
- Led the migration of frontend tooling to modern equivalents (Node.js 24, Vite, pnpm, Vitest), reducing build/startup time, and contributed to CI/CD pipeline design (CodeBuild/CodePipeline, migrating parts to GitHub Actions); leading research into migrating private npm packages to AWS CodeArtifact

JavaScript Developer — DataArt

Jan 2021 – Aug 2022

- Built complex frontend applications (Gatsby, React, TypeScript) and REST/GraphQL backend services across enterprise client projects
- Developed data-heavy dashboards with dynamic visualisations, focusing on performance and accessibility for a global, high-visibility user base, including localisation across dozens of countries (including RTL such as Arabic)
- Worked on systems handling large datasets, with a focus on performance and reliability
- Collaborated in an Agile team, contributing to CI/CD workflows and release processes

Full Stack Developer → Web Team Lead — TopDevs

Jan 2019 – Jan 2021

- Delivered full-stack features using React, Vue.js, Node.js/Express, and Docker in client-facing projects
- Grew from Laravel developer into a full-stack generalist (Laravel → Vue.js → React), then progressed into Web Team Lead — handling technical planning, estimation, and risk assessment for the department's projects
- Led the frontend stack transition from Laravel/Blade to Vue.js, and later introduced React and React Native as project needs evolved
- Improved application performance by reducing page load time by ~30% through optimisation of React rendering and API requests
- Advocated for and drove Docker adoption across the team, standardising local development and deployment

PHP Developer — S-PRO

Apr 2017 – Dec 2018

- Developed and maintained web applications and REST APIs using Laravel and WordPress
- Integrated third-party services and improved legacy systems architecture, introducing modular design practices
- Delivered multiple production systems, reducing manual processes for clients
